

SiS Forum - Dublin

- What is a recommendation ?

Goals of the report

- Has to be useful for further SiS actions
- Is not a scientific article even if clever
- Main target is members of ESF, but if other authorities or persons are concerned, should be readable and useful for them

3 chapters ?

- 1 - set the scene : why the question arises, why it is important (draft does exist+remarks by Sorensen+FL)
- 2 – Data we collected from survey and lectures and documentation; analysis of the current position of SiS in institutions (supported, ignored, etc.)
- 3 – recommendations :
 - general considerations: how to respond to analysis conclusions
 - List of recommendations
 - Description of recommendations

To be done in the next weeks

- Describe each recommendation
- Create a subgroup responsible for synthesis of recommendations
- Circulate the synthesis to members

To be done in summer and late summer

- Write the 3 chapters
- Members of the Forum should test the draft report in their environment and institution, to get reactions on interest and feasibility
- To produce a second draft report including those remarks, ready for discussion in autumn
