

The European Science Foundation's Member Organisation Forum calls for greater development in 'Science in Society' initiatives

Knowledge Speak: European Science Foundation report recommends 'Science in Society' initiatives

<http://www.knowledgespeak.com/newscategorydisplay.asp?category=Results/findings%20from%20research%20reports>

The European Science Foundation (ESF), an independent, non-governmental organisation, has released its report on 'Science in Society: a Challenging Frontier for Science Policy' at the ESOF 2012 conference in Dublin. The report, released by ESF's Member Organisation Forum (MO Forum) on 'Science in Society Relationships', calls for a strengthening of 'Science in Society' (SiS) activities in a time of ambiguity for science.

RMIMR: Science in Society: a Challenging Frontier for Science Policy

This new ESF report aims to highlight the role of science in society, to raise awareness of how scientific knowledge is translated into society, and to encourage better practice in the relationship between science and society. In order to achieve a better society and increase the quality of research and innovation, this MO Forum recommends that the following aspects be taken into account by ESF Member Organisations (MOs).

FrogHeart: Science should it be 'in' or 'and' society?

<http://www.frogheart.ca/?p=7373>

The European Science Foundation (ESF) has just launched a report on science 'in' society as opposed to the more common phrasing science 'and' society. I'm not sure changing from science 'and' society to science 'in' society is going to be noticed all that much. (In marketing circles it was known as that the company's correct name was The Gap but no one ever called it that and it was rarely written correctly by anyone other than company officials. Despite strenuous effort, it remained the Gap.)
