

# Modeling for Dr. Coli

a synthetic biology approach to  
intelligent bacterial drug delivery

Inge Thijs

2008 iGEM team KULeuven

ECSB II

April 1<sup>st</sup> 2009

Centre of Microbial and Plant Genetics  
Department of Microbial and Molecular Systems  
K.U.Leuven - BioSCENTER

# iGEM & BioBricks

- international **Genetically Engineered Machines** competition

- BioBricks: off the shelf DNA building blocks

Registry of Standard  
Biological Parts

# intelligent bacterial drug delivery

## Treatment of Murine Colitis by *Lactococcus lactis* Secreting Interleukin-10

Lothar Steidler,<sup>1\*</sup>† Wolfgang Hans,<sup>1</sup>† Lieven Schotte,<sup>1</sup>  
Sabine Neiryck,<sup>1</sup> Florian Obermeier,<sup>2</sup> Werner Falk,<sup>2</sup>  
Walter Fiers,<sup>1</sup> Erik Remaut<sup>1</sup>

Science 2000

- *Lactococcus lactis* expressing human IL-10 to treat IBD (e.g. Crohn's disease)
- University of Ghent – VIB
- ActoGeniX: AG011 currently in Phase 2 clinical trial in ulcerative colitis patients

## Environmentally Controlled Invasion of Cancer Cells by Engineered Bacteria

J. Christopher Anderson<sup>1,3</sup>, Elizabeth J. Clarke<sup>3</sup>, Adam P. Arkin<sup>1,2\*</sup>  
and Christopher A. Voigt<sup>2,3</sup>

J Mol Biol 2006

*E. coli* with *Yersinia pseudotuberculosis* invasin under control of O<sub>2</sub> and QS responsive promoter

# Dr. Coli

- **Dr. Coli delivers drugs *in situ***

drug production when a disease signal is sensed:

**Input and Output**

- **Dr. Coli self-destructs**

when the patient is cured, Dr. Coli will eliminate itself from its host:

**InverTimer, Cell Death, Reset, Filter**

- **Dr. Coli in production**

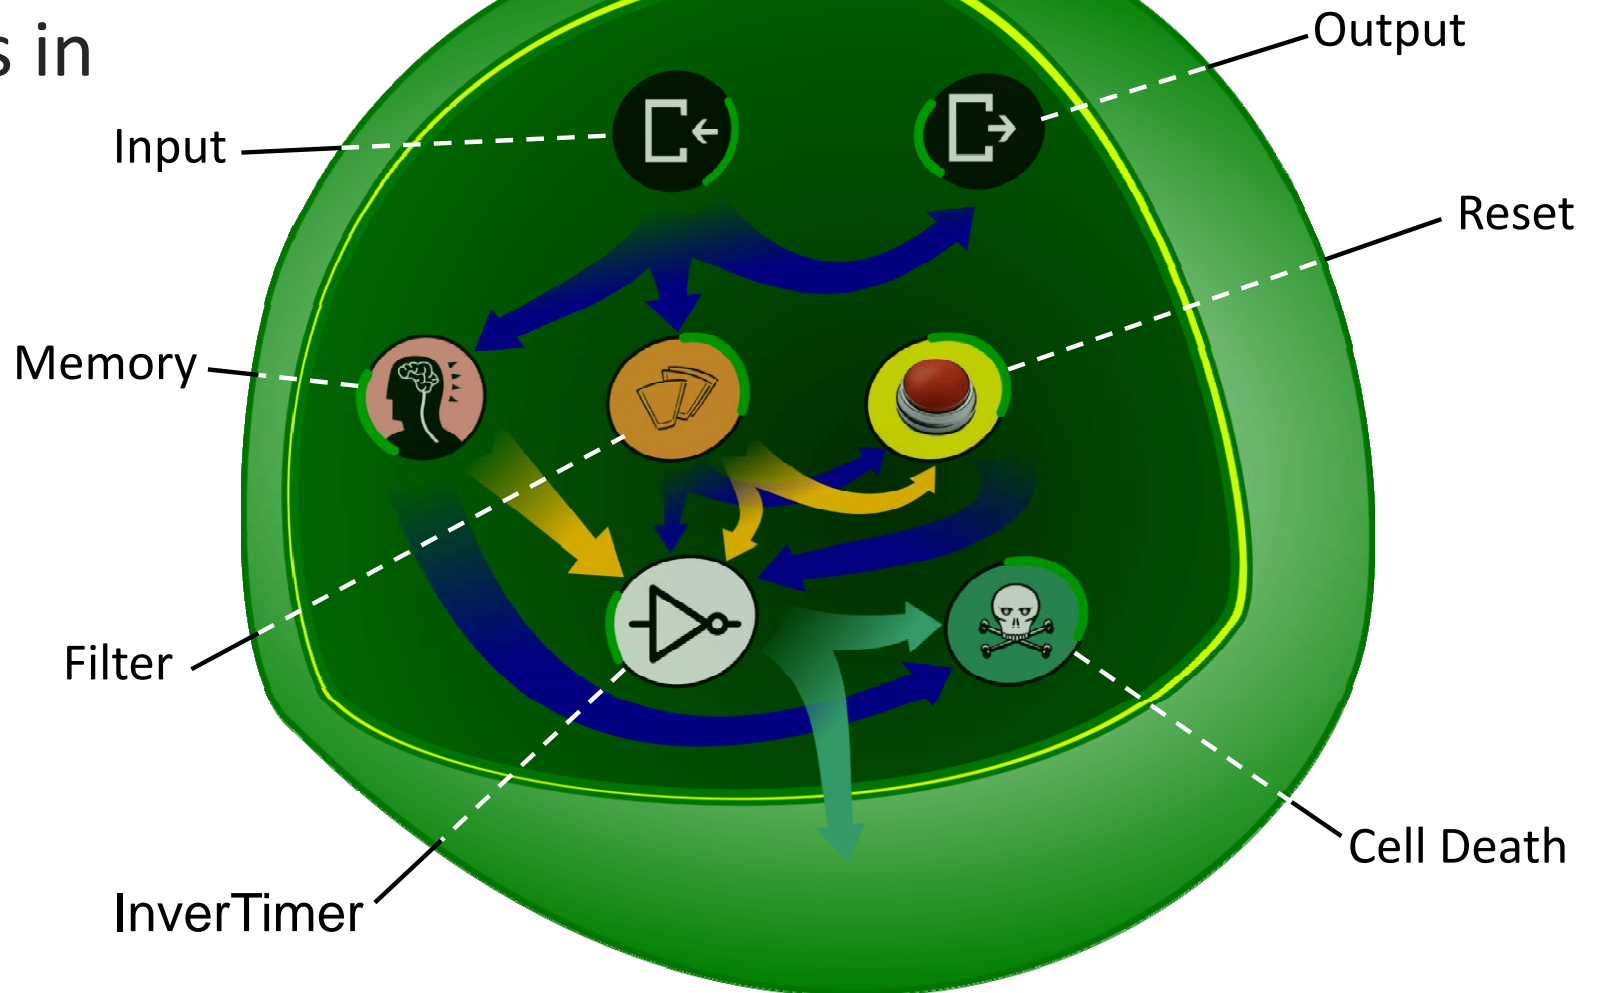

it should be possible to produce Dr. Coli without it self-destructing:

**Memory**

# Dr. Coli

7 subsystems in  
1 Dr. Coli

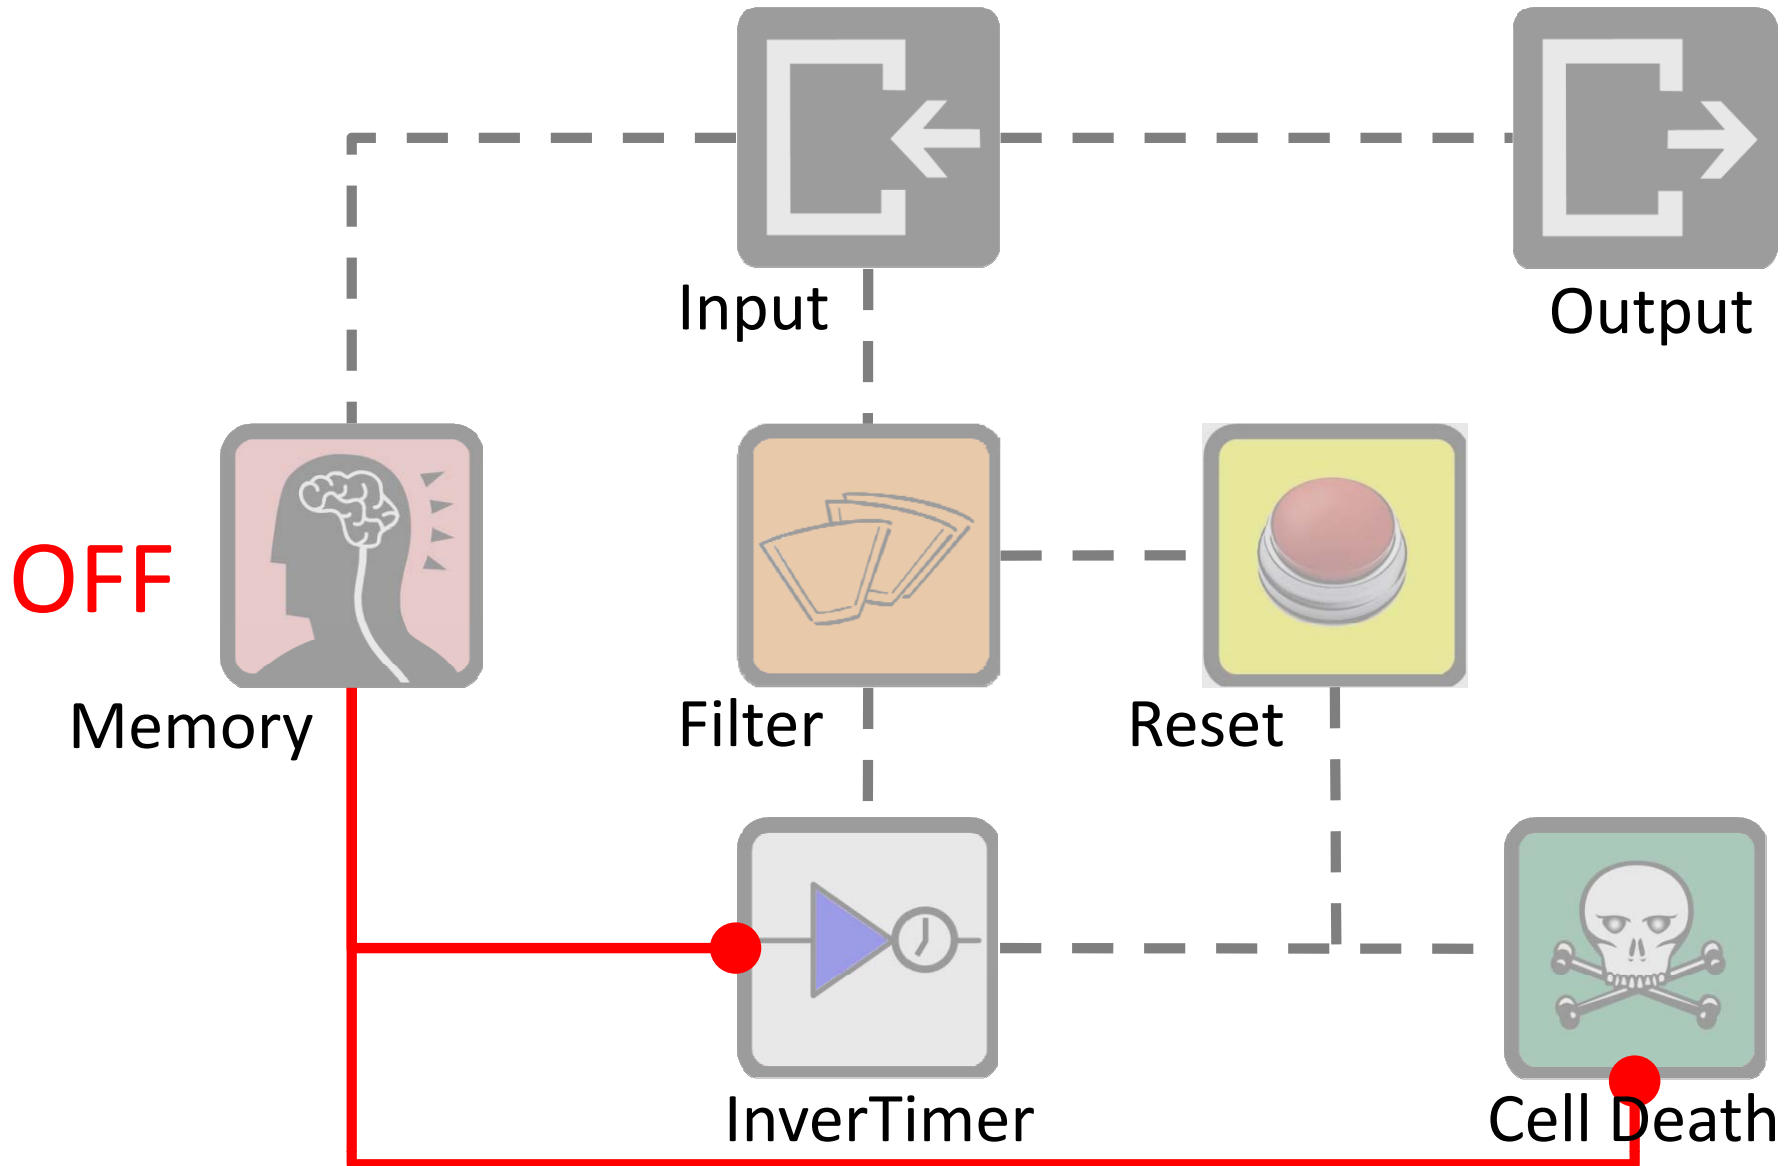

# Dr. Coli @ work

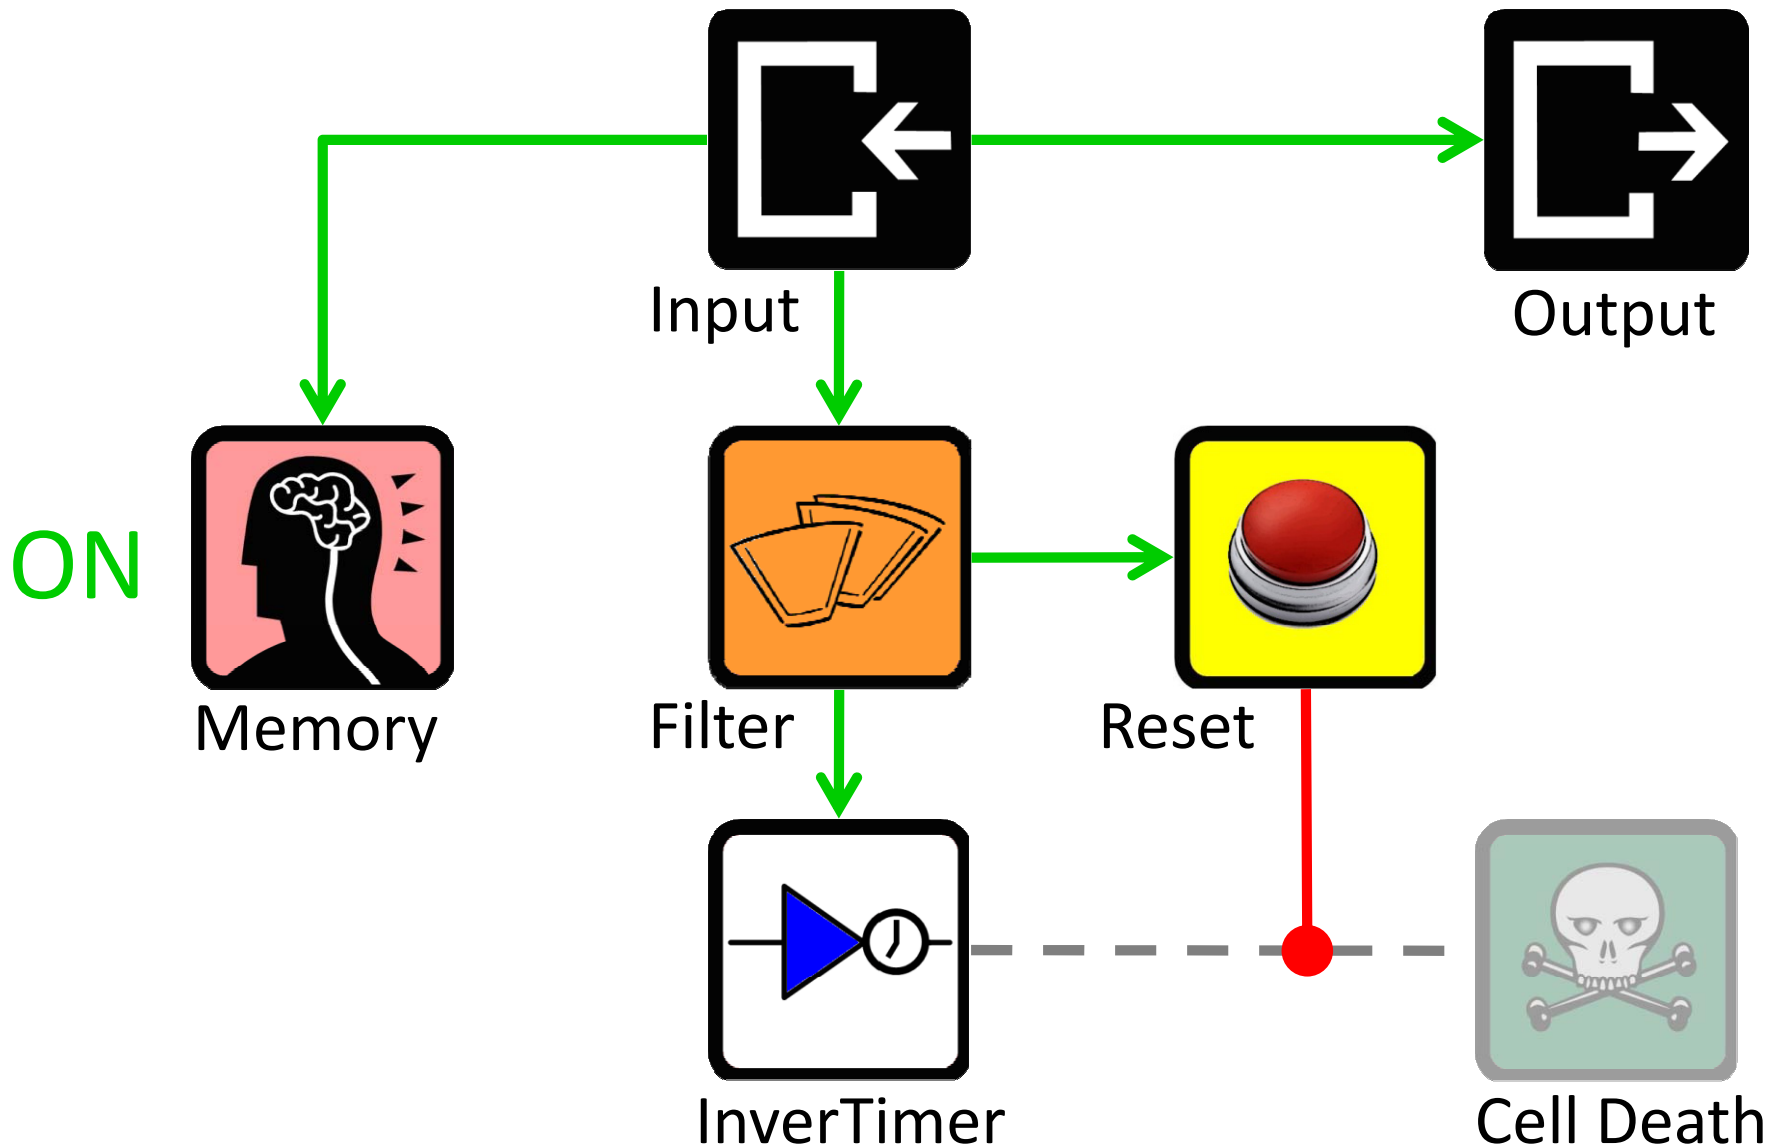

## Five different phases:

1. No disease signal 
2. First disease signal 
3. Temporarily/locally cured 
4. Patient relapse 
5. Patient cured 

# @ work 1: No Disease Signal

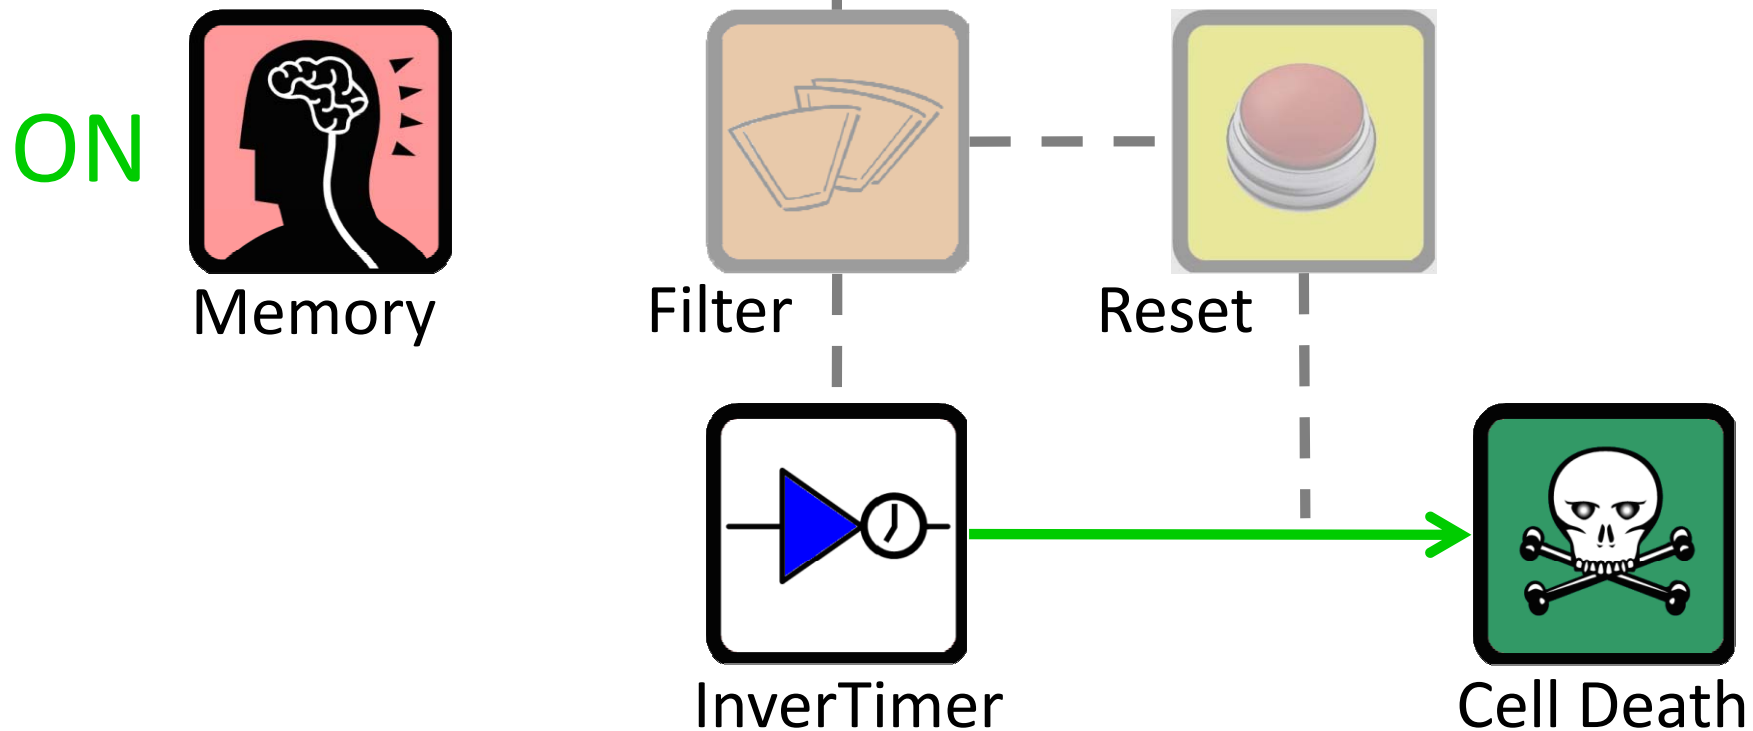

# @ work 2: 1<sup>st</sup> Disease Signal

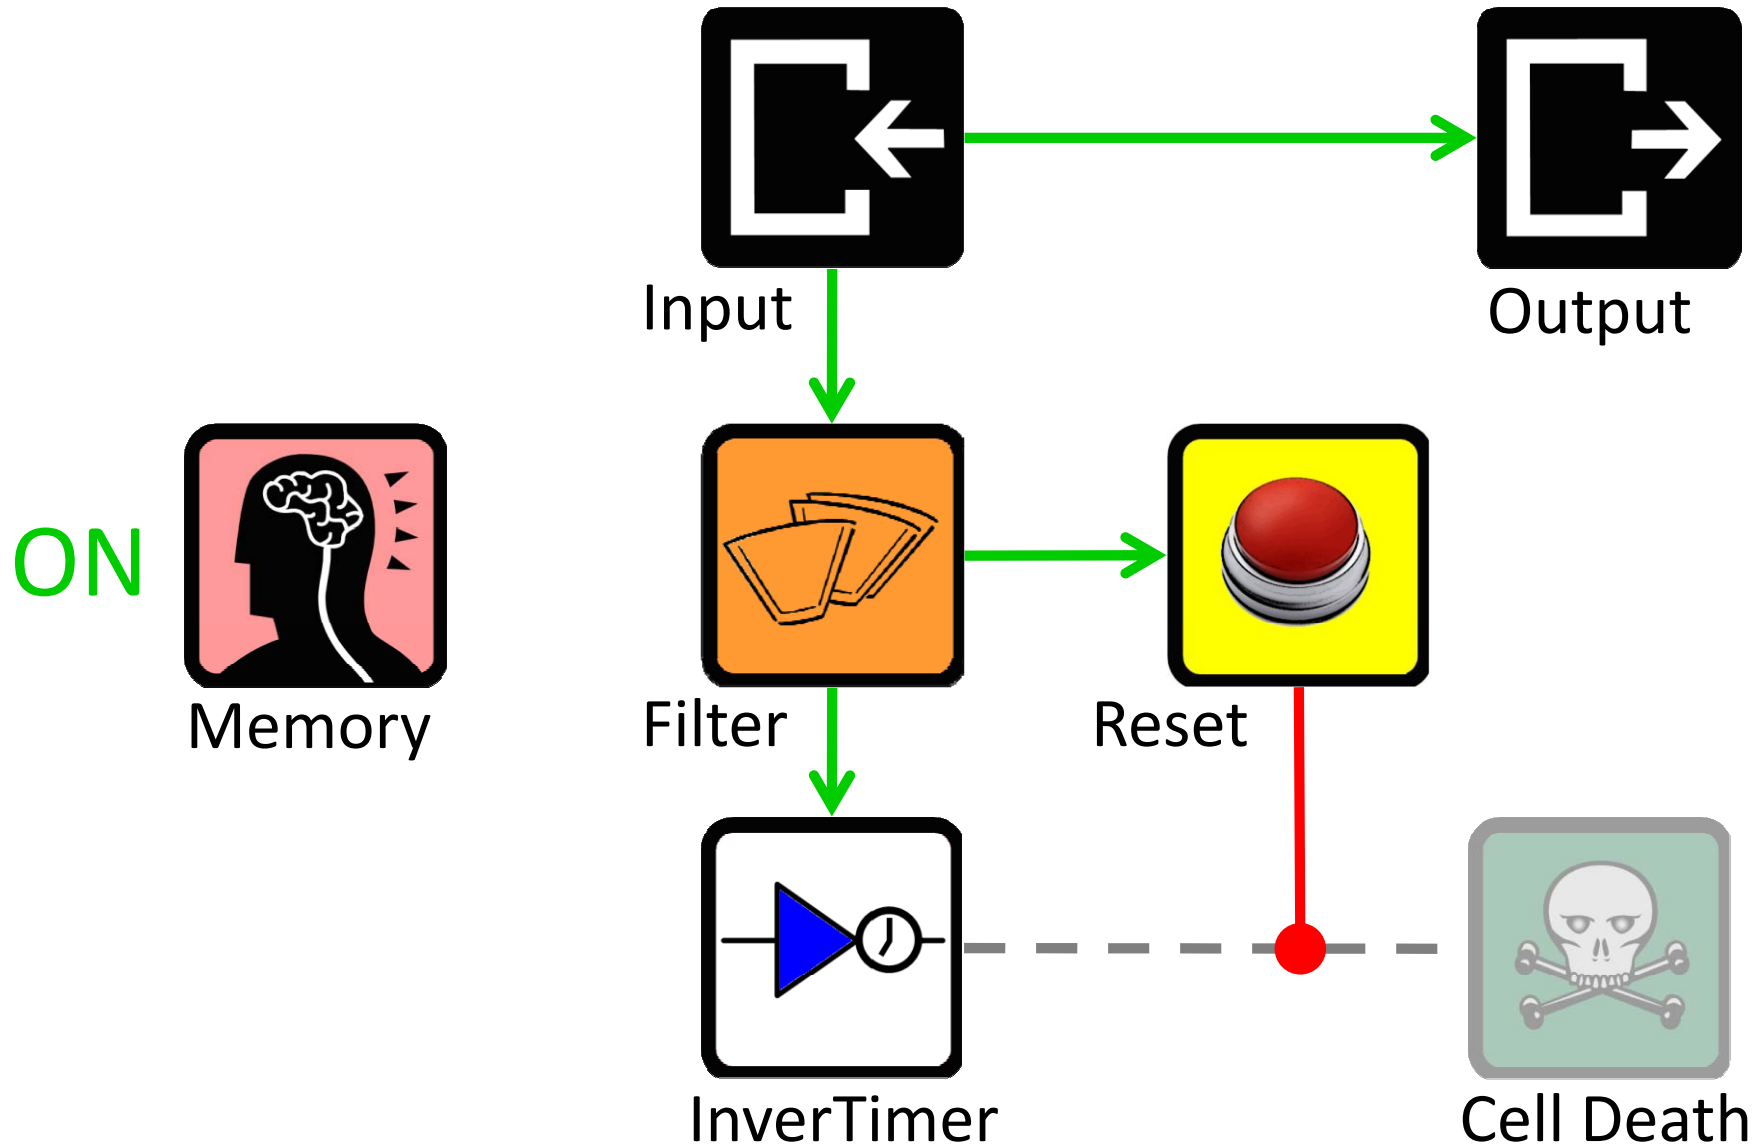

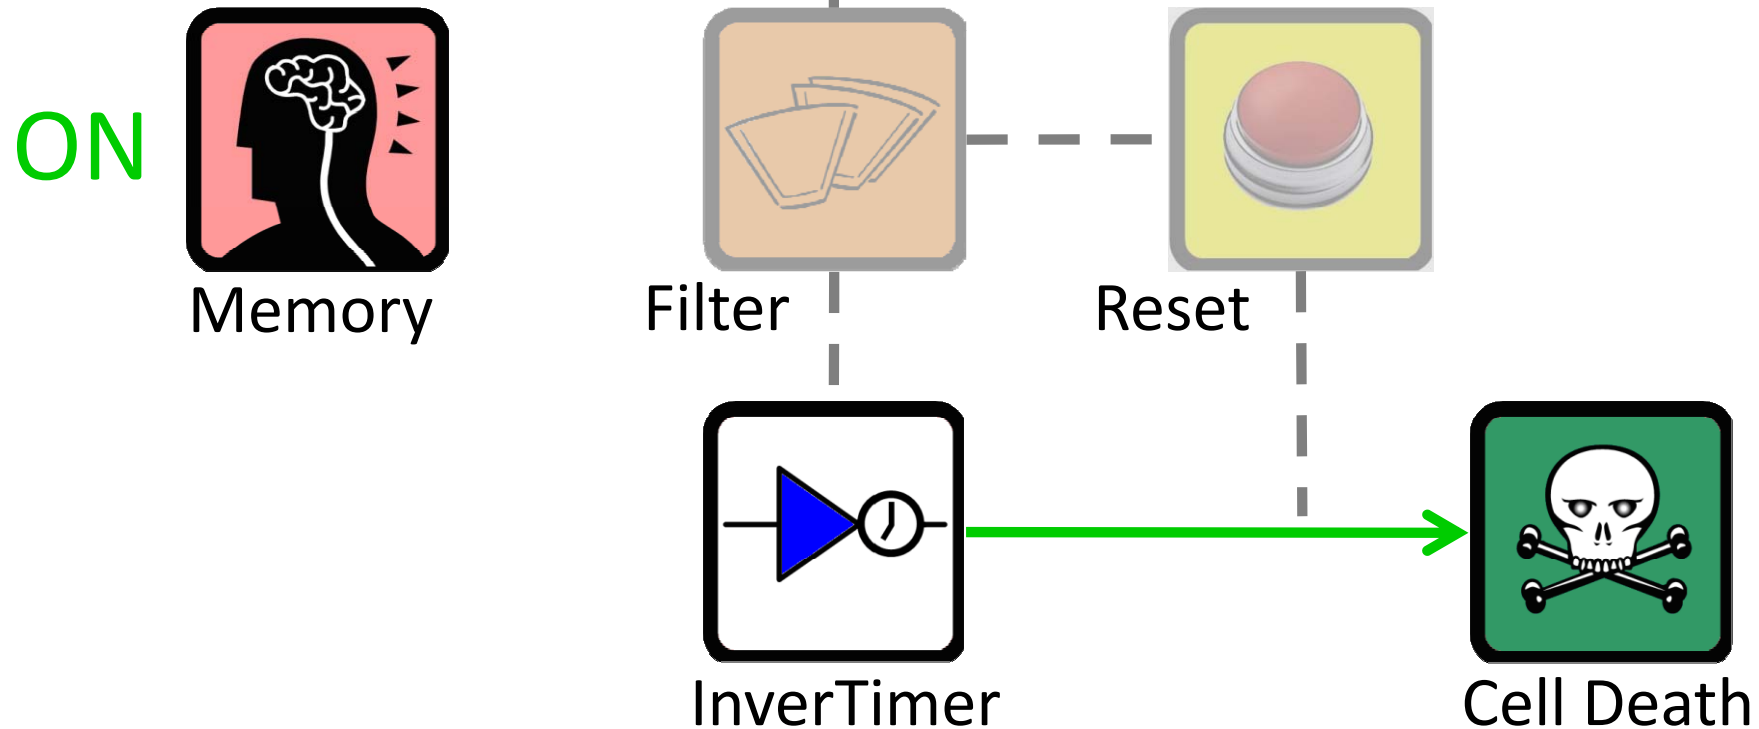

# @ work 3: Temp/locally Cured

# @ work 4: Patient Relapse

# @ work 5: Patient Cured

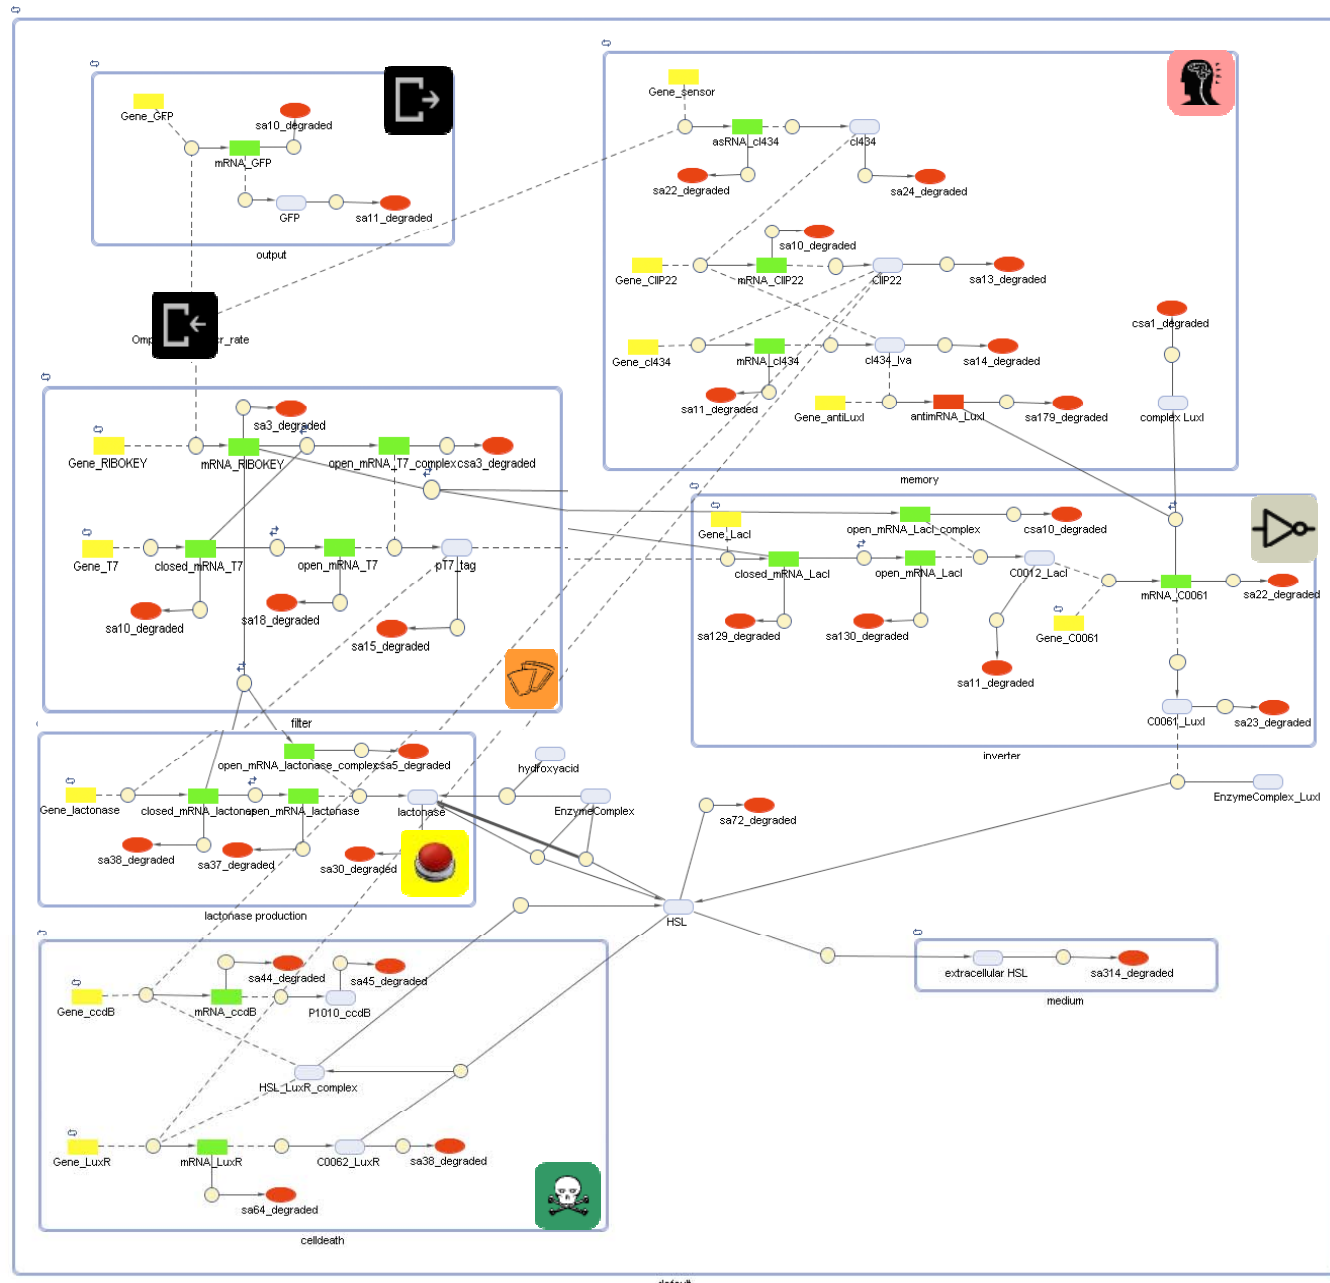

# Building Dr. Coli

- from subsystems to integrative model
- reuse BioBricks

# Dr. Coli subsystems

# Input - Output

- Input = disease marker
  - Dummy input: TetR ~ aTc

- Output = drug
  - Dummy output: GFP-LVA  
Andersen *et al.* 1998 Appl Environ Microbiol

# InverTimer & Cell Death

- No disease signal → Dr. Coli dies
  - Inverter
  - Timer molecules (HSL)
  - Suicide gene

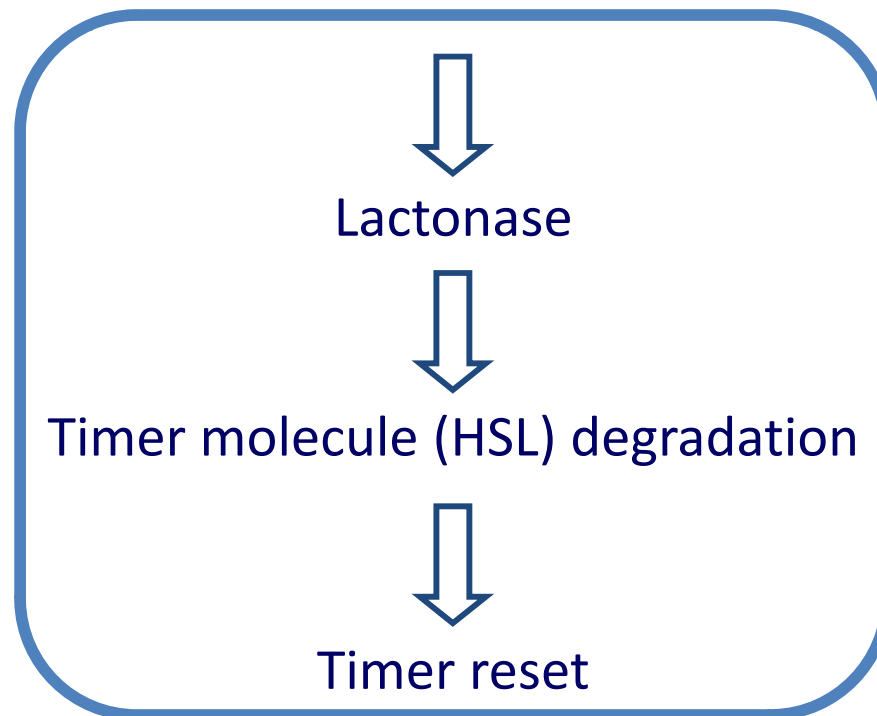

Input	InverTimer	Cell death
0	1	1
1	0	0

# Reset

- Renewed disease signal
- → timer reset

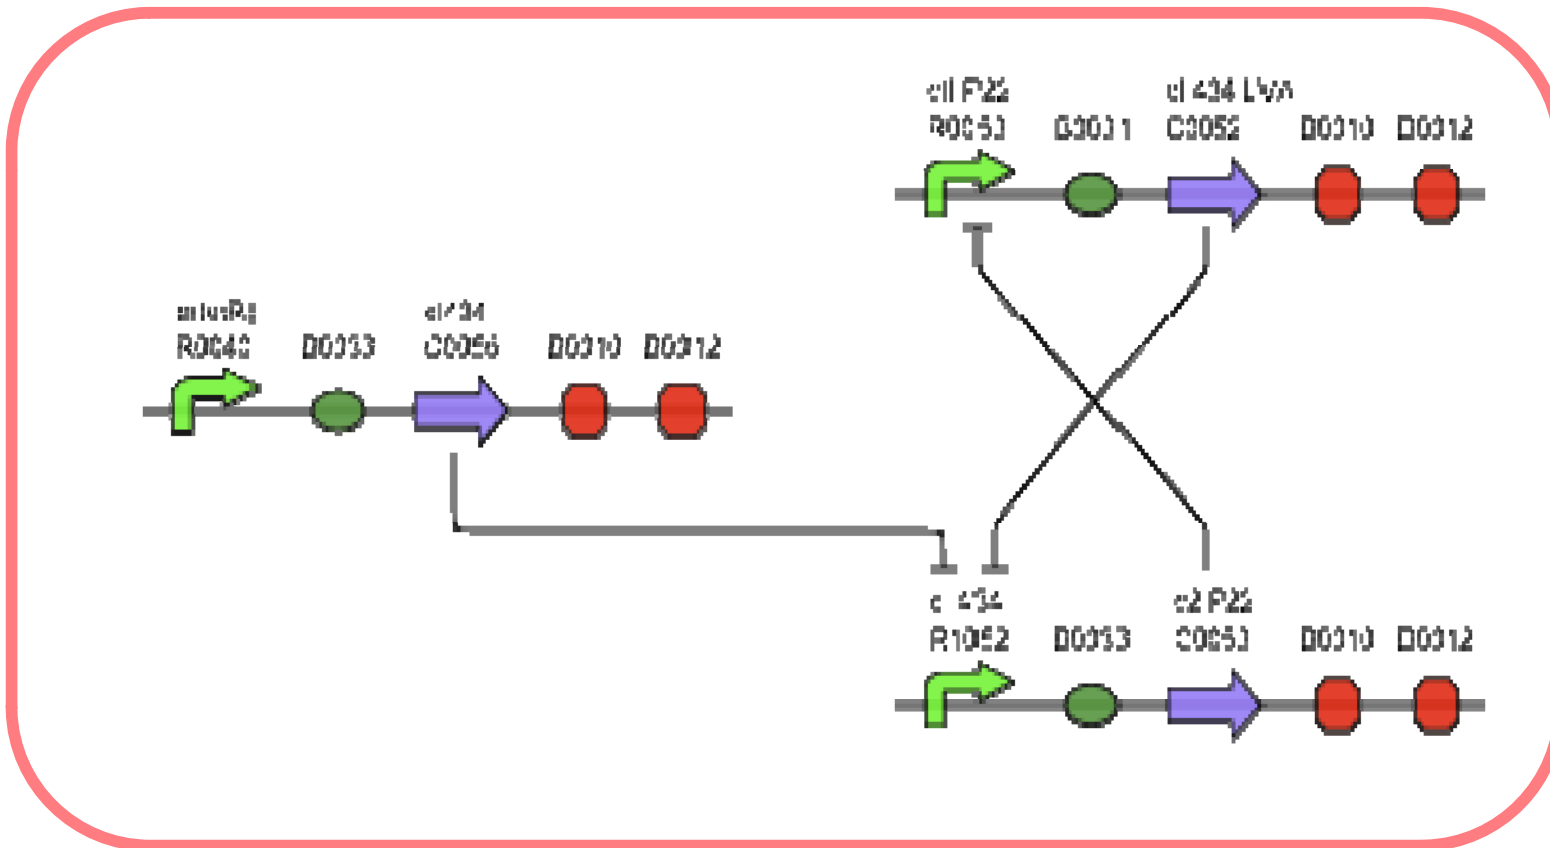

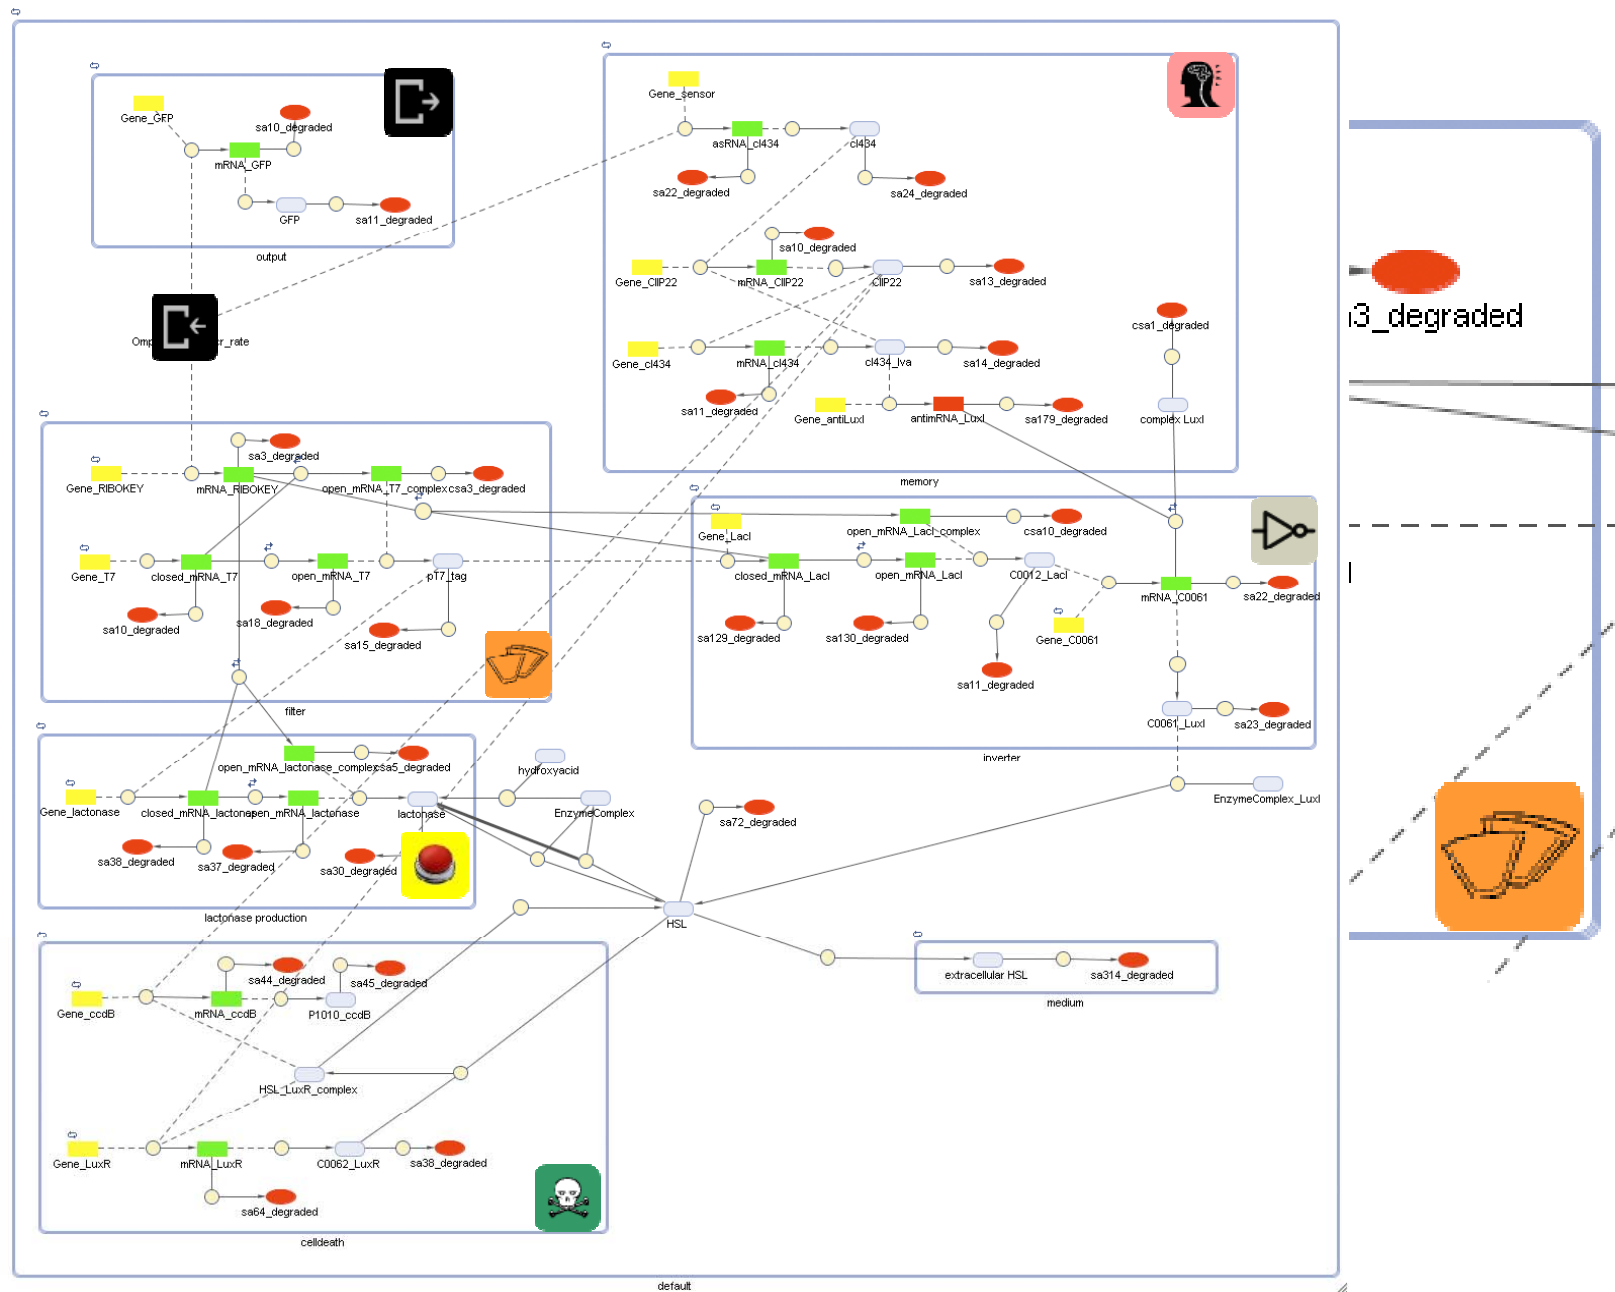

# Memory

- Production problem
- One time « ON » switch

# Dr. Coli integrated model

# Dr. Coli @ work

## Five different phases:

1. No disease signal 
2. First disease signal 
3. Temporarily/locally cured 
4. Patient relapse 
5. Patient cured 

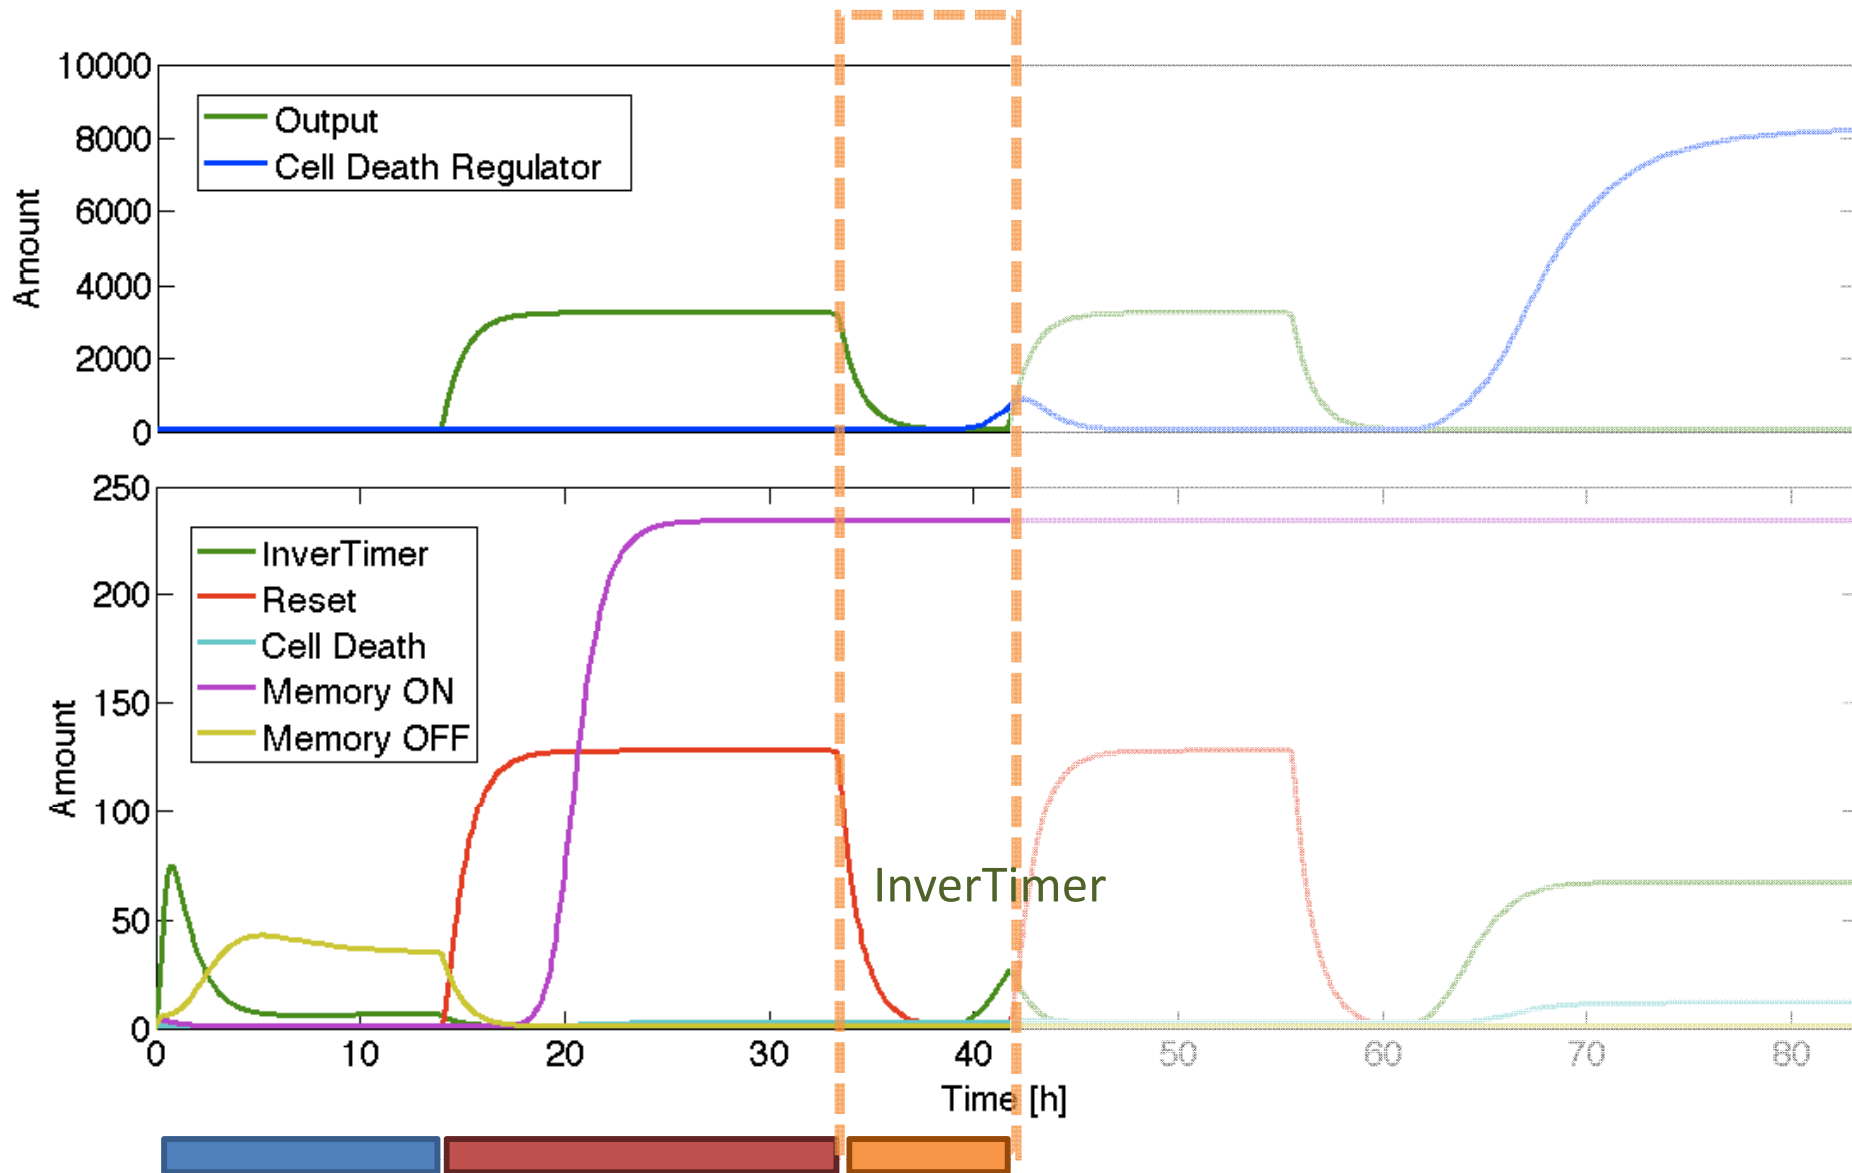

# Simulation 1: No Disease Signal

# Simulation 2: 1<sup>st</sup> Disease Signal

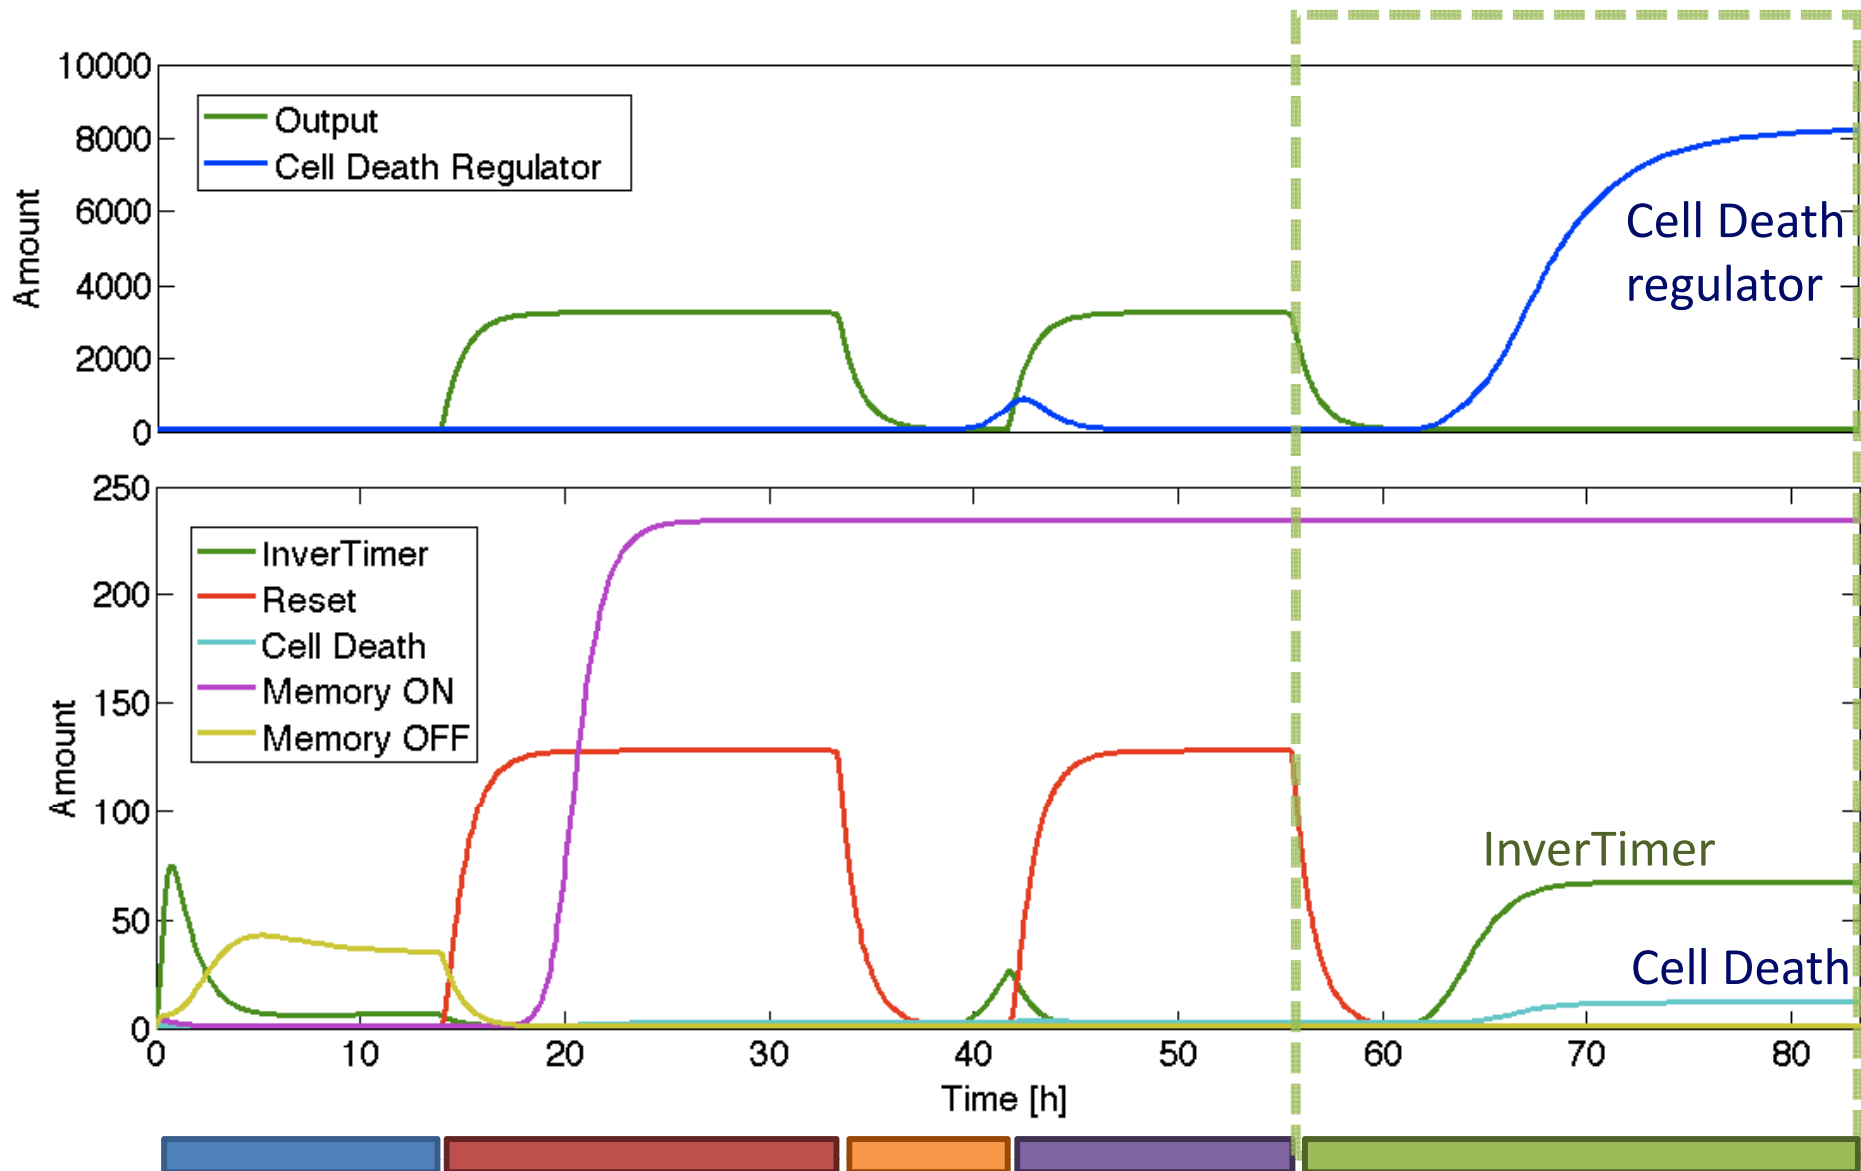

# Simulation 3: Temp/locally Cured

# Simulation 4: Patient Relapse

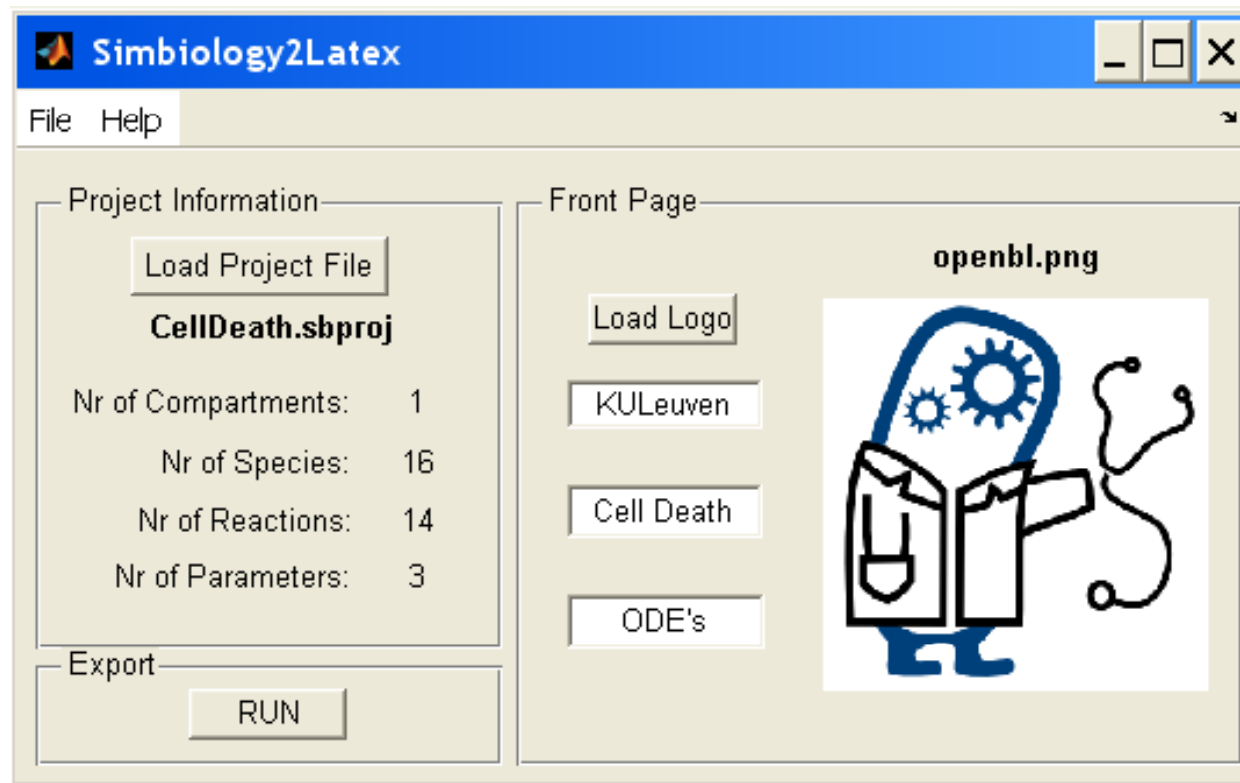

# Simulation 5: Patient Cured

# SimBiology2LaTeX toolbox

- converts the information in a MATLAB SimBiology model to LaTeX-code (species, parameters and values, reaction rates and ODEs)
